

A glimpse of the future

Aidan Williams
CTO, Audinate

Outline

- Standards shakeout
 - AES67 & AVB
 - Dante support for AES67
- Dante Via
 - Computer based audio networking
- Future services
 - Scaling media networks
 - Routing and security

Standards Shakeout

AES67 in a single slide

- What is it?
 - Interoperability specification
 - Existing standards from the Internet world
 - Audio transport only
- AES67 is not:
 - A spec for a complete system
- Why is it interesting?
 - Deployable: works with existing switches
 - Pragmatic scope

What about AVB?

- Our customers: interest is declining..
 - AES67 offers an alternative
- Switches support remains an issue
 - AVB features not widely available
 - OK if you ship your own switches
- AVnu activities continue
 - Automotive, industrial control, ...
 - TSN/Layer3: making AVB work with IP

Dante support for AES67

- Firmware update released to OEMs
 - Announced April @ NAB show
 - New feature addition: AES67 support
 - Existing ATP & AES67 transports will coexist
 - Single firmware speaks both
- Stream setup with Dante Controller
- Simple discovery scheme
 - Enables 3rd party discovery

Dante **Via**TM

Networks, merges and routes
all of your computer's audio
streams and devices

 **Dante**TM

Limitless Possibilities

- Create a computer-only Dante audio network
- Connect USB and Firewire interfaces to Dante
- Extend computer microphones and speakers
- Route application audio to any receiver

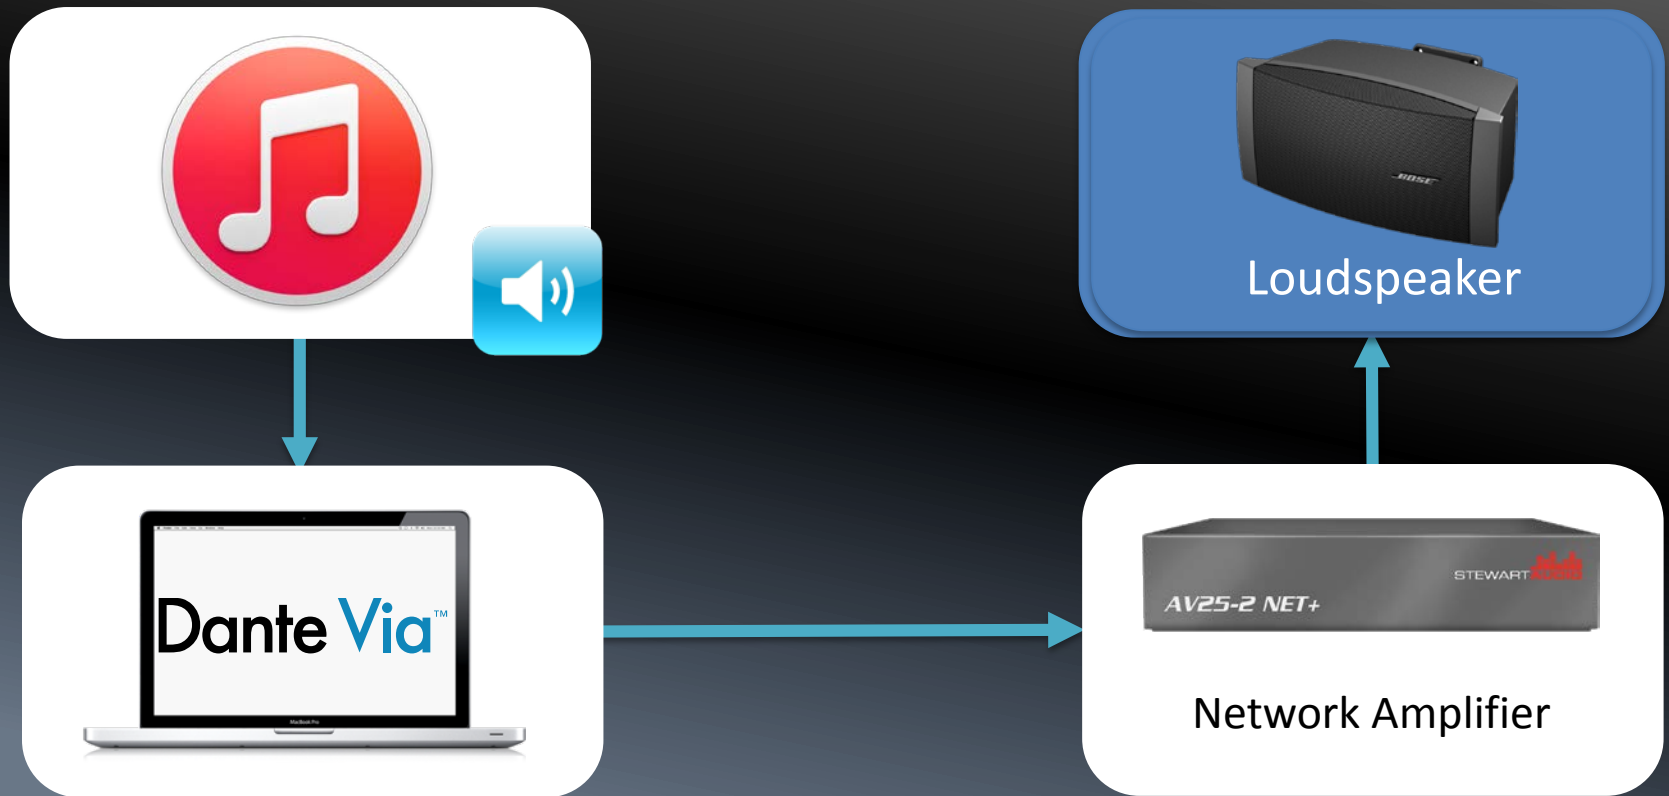

Extend your audio

Network Services

The scale tipping point

- Today, most audio networks are not *large*
 - By networking standards at least
- As audio networking becomes ubiquitous
 - Integration like never before is possible
 - Systems become larger
- *Tools and services supporting large scale systems will become critical*

Future needs

- Combining LAN audio networks into larger systems
 - Sync, transport and discovery across IP routers
- Allow systems to share network infrastructure without interfering with each other
- Administrative controls to prevent unauthorized changes
- Logging and tracing
 - For support staff, SLAs, post mortems

In Development

- Services platform
 - Deployable on PC/Mac platforms
 - Enables management services
- Initial services
 - Services for routed IP networks
 - Administrative controls for Dante networks
 - Logins & access controls

Wrapup

- Standards shakeout
 - AES67 & AVB
 - Dante support for AES67
- Dante Via
 - Computer based audio networking
- Future services
 - Scaling media networks
 - Routing and security
